Polysius AG and Elex AG have established Elex CemCat AG as a joint venture for advancing the catalytic flue gas cleaning technology in nonmetallic mineral processing plants

ELEX strengthens its systems business on the environmental technology in cement plant engineering sector.

The increasing demands imposed on the cleaning of flue gas in the cement industry have to be met with the best solutions. Polysius AG and Elex AG have therefore founded a joint venture for catalytic flue gas cleaning (SCR).

Elex AG is a leading company on the flue gas cleaning sector and has been instrumental in developing catalytic flue gas cleaning technology for the cement industry.

The joint venture will combine the technological knowhow of the cement manufacturing process and the worldwide plant engineering activities of Polysius AG by adding attractive and future-oriented environmental technologies of ELEX AG.

The registered office of the new company is Schwerzenbach (near Zurich) in Switzerland.
